Note: This is a guide only to selecting the right product for your application. For high traffic areas it is recommended to use the thicker product option. It is recommended that you check with one of your Regupol Team Members for confirmation of the right product for your area. Please check the fire and slip classifications for your building to match with the everroll® rubber flooring material type that is suitable for your project - see downloads at [www.regupol.com.au](http://www.regupol.com.au)
